Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide a overview of your project's file and folder structure below:

```
Credit_Card_Approval_Prediction/  
    |—— app.py  
    |—— approval_model.pkl  
    |—— approval_scaler.pkl  
    |—— cc_approval_data.csv  
    |—— create_approval_data.py
```

Step 3: Deployment / Access Details**Hosted / Deployed URL**

<https://github.com/shaikghousunnissa123/Credit-card-approval-Prediction/tree/main>

Login Credentials (Demo) no authentication

Platform / Hosting Provider github

Repository Link

<https://github.com/shaikghousunnissa123/Credit-card-approval-Prediction/tree/main>

Demo Video Link

<https://drive.google.com/file/d/1ReMwiMaS31rFKuVOwJIItbkkIts09cNK/view?usp=sharing>

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

- Python 3.10 or higher installed locally.
- Access to terminal / command line environment framework interface.

Step 1: Clone the repository

```
$ git clone https://github.com/ghousiyaunnissa/Credit-Card-Approval-Prediction
$ cd Credit-Card-Approval-Prediction
```

Step 2: Install dependencies

```
$ pip install -r requirements.txt
```

Step 3: Start the backend routing application core engine

```
$ python app.py
```

Step 4: Open web browser to execute local user interface view frame

Navigate parameters directly to: <http://127.0.0.1:5000>

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Initial execution thread allocation compilation latency peak limit context on slow processors.	Modelweight binaries are persistently pre-cached into initialization instance loops to avoid ongoing request lags.
2	Missing variable fields or Null input parameters throws vector calculation bounds matrix exception flags.	Frontend UI inputs are strictly constrained by required validation flags to intercept unmapped null entries cleanly.
